"Silo"

Every Ounce of Corn Crop Production Should be Saved

# Order a Unadilla Silo Now

*The Government, the State Council of Defense and the Food Administration are requesting every farmer who has 12 or more head of cattle to ORDER A SILO AT ONCE and fill it this year.*

*Food  
Will Win The War*

*We have a large stock of silos on hand now at our Des Moines factory and on immediate orders we can make prompt shipments.*

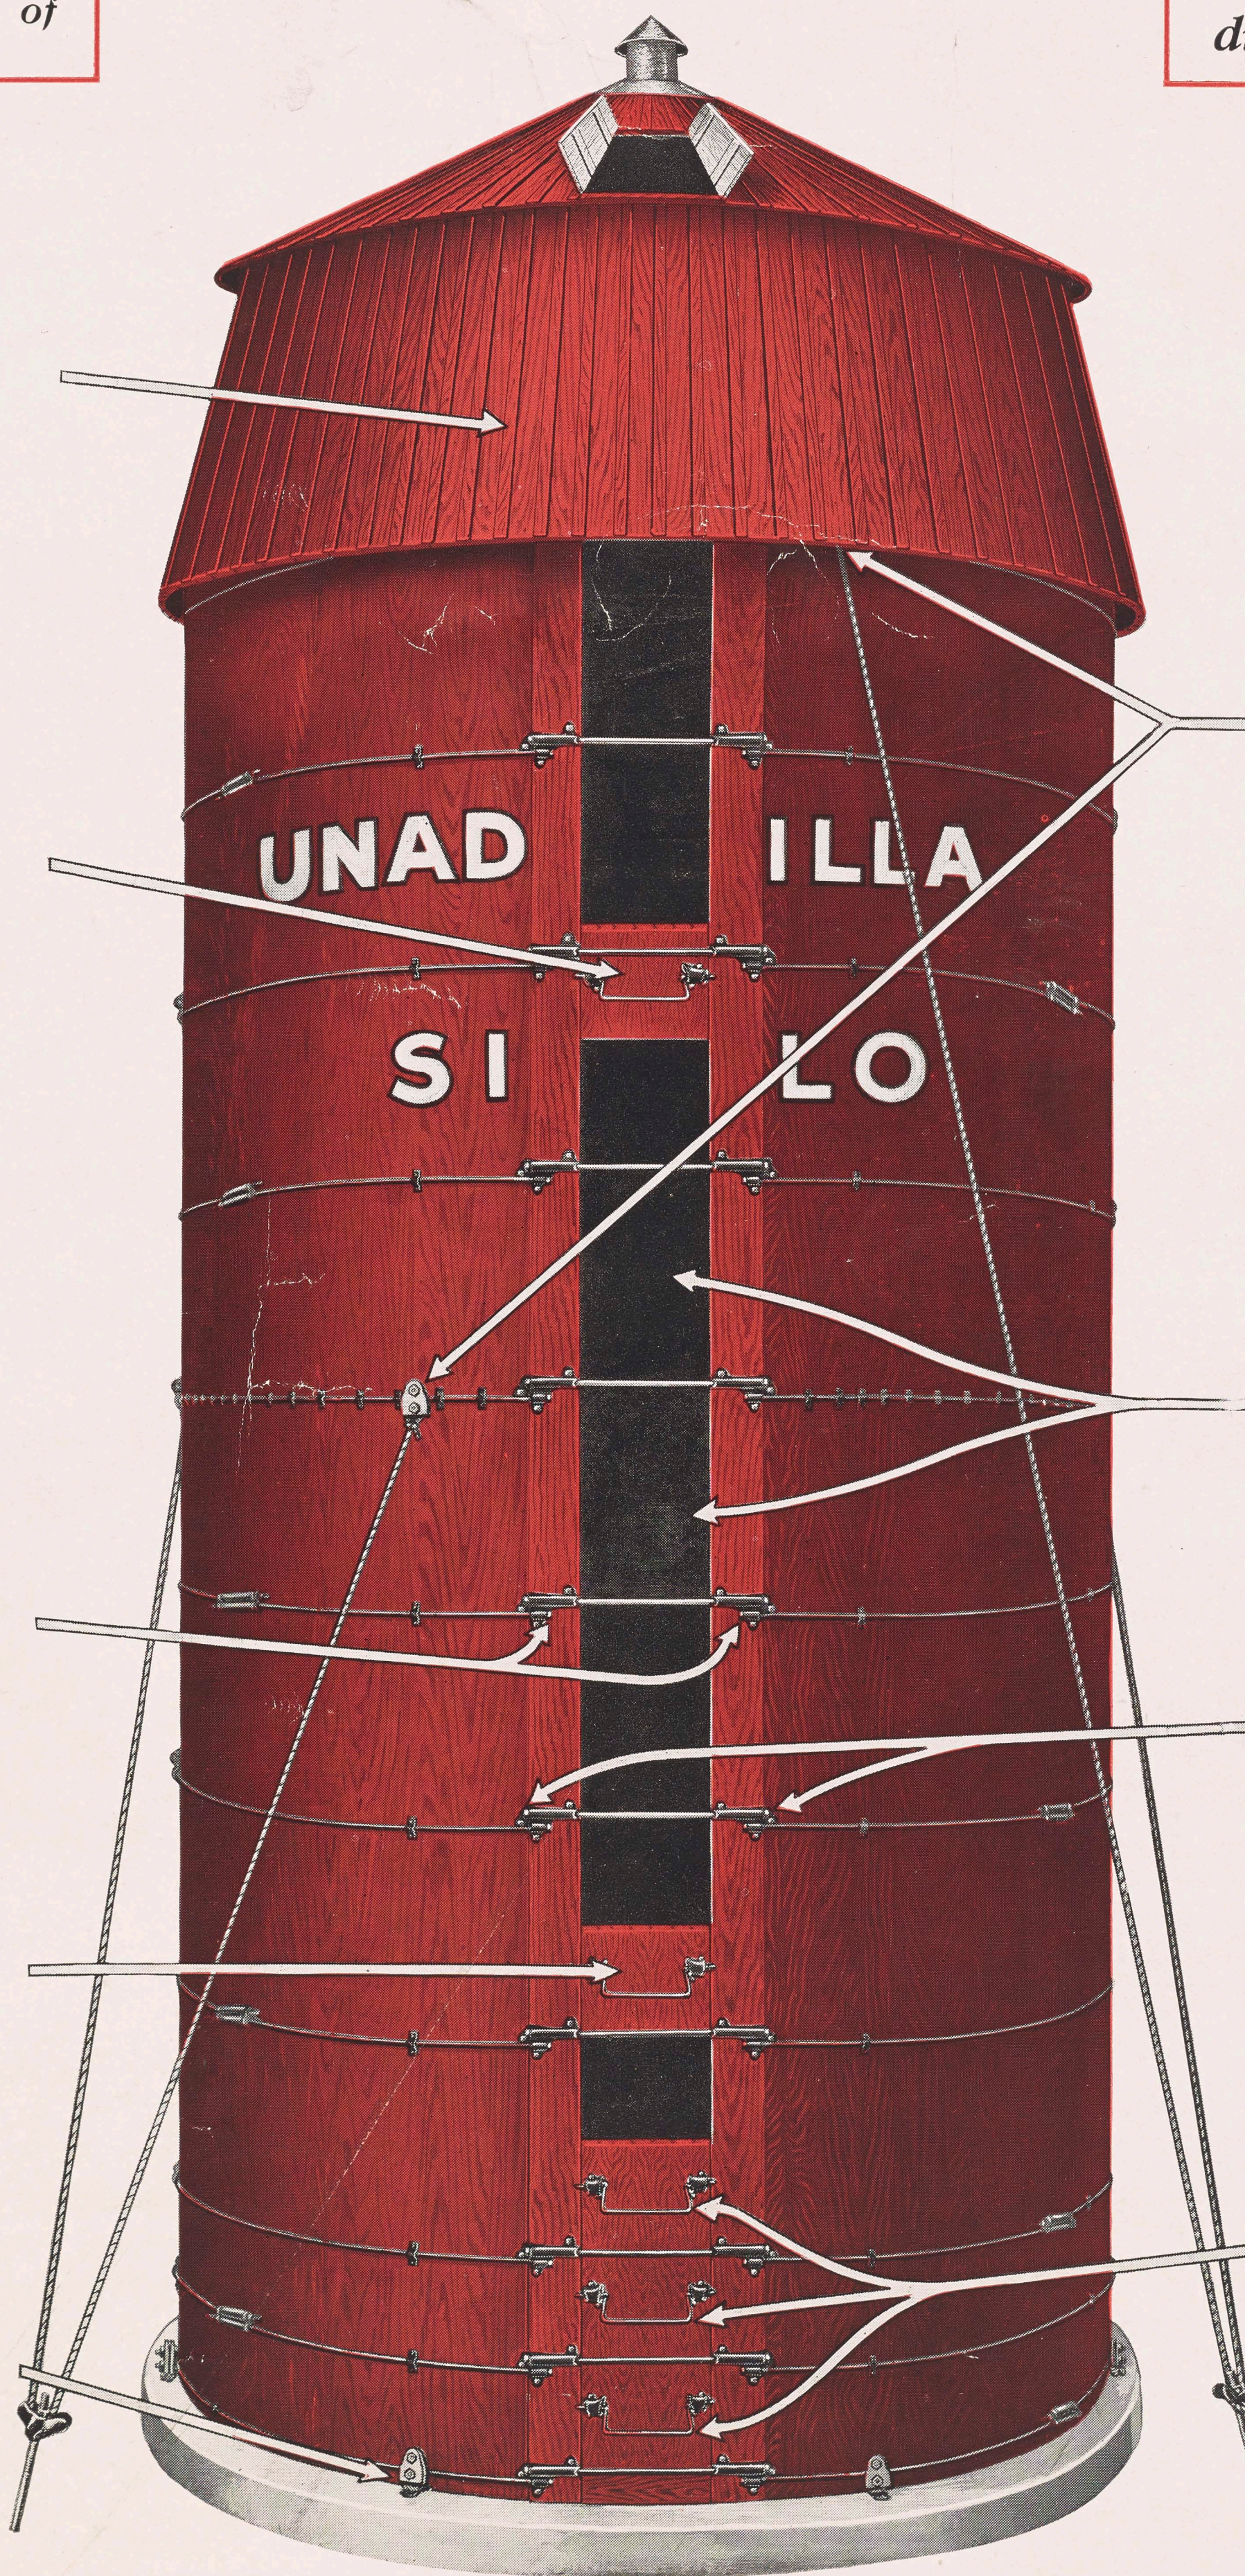

Complete wood roof with galvanized iron ventilator, ready cut to fit and easy to put on. Illustration shows our Unadilla hip roof which adds 4 to 6 feet to filling capacity.

Doors can be left in the opening at any height as our fastener is entirely on the door.

You can tighten every hoop on the Unadilla Silo from the ladder on the door in an hour's time. No separate, dangerous, slipping ladders needed.

Unadilla doors 17½ inches high, double thick, easy to handle, weigh only 14 pounds. Any boy can shift them.

6, 8 or 10 (depending on size of silo) adjustable base anchors of steel cable, imbedded in the cement foundation, hold the Unadilla Silo immovable.

Galvanized steel cable anchors connect with both top and center hoops through equalizing saddles attached to ground rods.

An unobstructed continuous door opening, 22 inches wide, which enables the feeder to raise the doors as he comes to them and pitch out on a level instead of pitching silage up two or more feet over doors and cross bars.

Unadilla doors can never stick or bind. A few turns of nuts here adjust door frame to perfectly fit the doors, always insuring an air-tight door.

Our safe fasteners make a permanent, substantial ladder, which may be used to any height in the silo. The rounds are 17½ inches apart, stand out 5 inches from door and are 12 inches wide.

## Central Unadilla Silo Company
